DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed July 2, 2009 has been received and considered.

Allowable Subject Matter

Claims 1 and 2 are allowed.

The following is an examiner's statement of reasons for allowance:

Applicant's arguments filed December 30, 2008 are found persuasive. Specifically, Applicant's argument that the Miyazaki reference fails to disclose a forced flow is found persuasive.

Regarding independent claim 1, the references of the Prior Art of record fail to teach or suggest the combination of the limitations as set forth in claim 1, and specifically comprising the limitation wherein a method of sealing a glass panel assembly by melting a seal frit which is applied between two mutually overlaid glass substrates comprises a preliminary heat process where temperature of the glass panel assembly is increased to a preliminary temperature within a forced flow of a heating medium, the preliminary temperature being lower than a temperature at which the seal frit begins to melt, a pressure reduction process where pressure surrounding the glass panel assembly is reduced while the preliminary temperature is maintained, a sealing process where temperature of the glass panel assembly is raised from the preliminary temperature to a sealing process temperature within a forced flow of a heating medium,

and a cooling process where the glass panel assembly is cooled within a forced flow of a cooling medium.

Regarding independent claim 2, the references of the Prior Art of record fail to teach or suggest the combination of the limitations as set forth in claim 2, and specifically comprising the limitation wherein a glass panel assembly sealing process furnace incorporates a transport mechanism as means of transporting a glass panel assembly therethrough and melting a seal frit which is applied between two mutually overlaid glass substrates of the glass panel assembly, comprising a preliminary heating portion, a pressure reduction portion, a sealing treatment portion and a cooling portion sequentially disposed along a transport direction of the glass panel assembly by the transport mechanism, and pressure adjustment portions capable of increasing and decreasing pressure, installed between the preliminary heating portion and the pressure reduction portion, and also between the pressure reduction portion and the sealing treatment portion, wherein the preliminary heating portion heats the glass panel assembly with a forced flow of a heating medium to a preliminary temperature, the preliminary temperature being lower than a temperature at which the seal frit begins to melt, the pressure reduction portion decrease a pressure surrounding the glass panel assembly and maintains the preliminary temperature, the sealing treatment portion heats the glass panel assembly with a forced flow of a heating medium to a sealing process temperature from the preliminary temperature, and the cooling portion cools the glass panel assembly with a forced flow of a cooling medium.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anne M. Hines whose telephone number is (571) 272-2285. The examiner can normally be reached on Monday through Friday from 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimesh Patel can be reached on (571) 272-2457. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
